3. What are the four steps of the statistical investigation?

1. **Formulating a question:** Determine the research question or hypothesis to be addressed.

2. **Collecting data:** Gather data relevant to the question through surveys, experiments, or observations.
3. **Organizing and visualizing data:** Summarize and display data using tables, graphs, and charts.
4. **Drawing conclusions:** Analyze the data to make inferences and draw conclusions about the population.

4. What are the different types of variables?

- **Categorical variables:** Classify observations into distinct categories or groups.
