This chapter surveys the limited success of psychiatry in reaching beyond asylums through the development of psychological clinics and the promotion of 'mental hygiene' in the interwar years. It draws attention to a quieter but more far-reaching process of integrating a psychological dimension within general practice and general hospitals that reflected, in part, misgivings about an overly materialist medicine. This was encouraged initially by a focus on private consumers of medicine, as well as worthy shell-shock recipients, and by forms of psychotherapy and discourses that focused on the nerves, rest, and personal attention. A shift to patients who were recipients of a state service, despite psychiatric epidemiology that claimed a psychological dimension in a third of all illness, exposed limited state resources and a continuing concern about malingering that held back the development of psychological medicine, even under the National Health Service.

## TOTAL INSTITUTION ERVING GOFFMAN

### Total Institutions: Insights from Erving Goffman

#### What are Total Institutions?

Total institutions are social settings where individuals are subject to strict rules and supervision. They include prisons, mental hospitals, military bases, and boarding schools. In such institutions, everyday life is highly controlled and individuals' identities and autonomy are often challenged.

#### Erving Goffman's Study

Sociologist Erving Goffman coined the term "total institution" in his seminal work, "Asylums: Essays on the Social Situation of Mental Patients and Other Inmates." Through observations and interviews, Goffman explored the profound impact of total institutions on individuals' identities and social interactions.

#### Characteristics of Total Institutions

According to Goffman, total institutions are characterized by:

- **Isolation from the outside world:** Individuals are often cut off from friends, family, and society.
- **Regulated daily routines:** Activities are strictly scheduled and monitored, leaving little room for individual choice.

- **Depersonalization:** Individuals are assigned numbers or uniforms, diminishing their sense of self.
- **Strict hierarchy:** Power is concentrated in the hands of authority figures, creating a clear divide between staff and inmates.

### Impact on Individuals

Total institutions can have a profound impact on individuals' identities and well-being. They may experience:

- **Loss of Autonomy:** Individuals' choices and control over their lives are severely restricted.
- **Identity Crisis:** Individuals may struggle to maintain a sense of self when their identities are challenged and suppressed.
- **Social Stigma:** Total institutions can carry negative connotations, leading to public stigma and discrimination against their former inmates.
