Regional development promotion: The case of three Nordic innovation agencies.

The paper deals with approaches to support innovation in regions in terms of different functional models of innovation agencies. Attention is focused on national and hybrid innovation agencies that support innovation to address societal challenges in regions. Agencies with this modern approach can be found mainly in

the Nordic countries, therefore, we chose innovation agencies in Sweden, Norway and Finland for our research. The aim of this paper is to identify and compare approaches to regional development support of the Nordic national innovation agencies, emphasizing the challenge-oriented side of the measures. As the main research method, three case studies are used to demonstrate the influence of these agencies on regional actors. Each case study provides information on the basic organisation of the agency and the selected programme it implements. The key to selecting the programmes was their regional dimension and an application of a mission-oriented approach. Although all these agencies are generally considered successful and inspiring for other countries, our research has shown that they partially differ in their approach to regional development. For innovation agencies in other countries, the emphasis on the mission-oriented approach can be particularly inspiring. We found differences in the regional activities, establishment of regional offices, overall responsibility of the agency, main topics of interest and approach to mission-oriented policy.

OPPORTUNITIES FOR THE DEVELOPMENT OF INNOVATION AMONG HOTELS IN NORTHERN HUNGARY.

The aim of the study is to analyse the various infrastructural developments of the tourism sector in Northern Hungary. The study examines the innovation potential and its obstacles of hotels in the region. The research is based on a survey of hotel managers, using Kruskal – Wallis tests as the main statistical method. The well-developed infrastructure and the effective adaptation and application of innovations are essential for the creation of complex tourism packages based on the tourist attractions of the region and thus contribute to the development of the region. The research confirms that tenders for development are more common in larger and more capital-intensive hotels. The smaller ones are excluded from the tender system partly due to the lack of qualified labour. There is progress in innovation; most people are currently implementing product / service innovation.

Abstract: In the early twentieth century, the US federal government created homesteading programs to "Americanize" Hawai'i by encouraging the mass settlement of white families "of good character" to Hawai'i, but to little avail. This essay analyzes a 1912 hearing about the failure of white homesteading in the

Territory of Hawai'i, focusing on discourses of race and land use by settler and 'iwi testifiers. Federal leaders and Territory proponents of homesteading mapped the familiar racial formations of vanishing Natives, alien Asians, and white pioneers onto Kōnaka 'iwi, Asian plantation workers, and white American homesteaders to further their cause. 'iwi political leaders Jonah Kōhi Kalaniana'ole and Charles Kahiliulani Notley intervened; although they approached the question of "Americanization" differently from one another, both manipulated and rejected elements of that racial framework according to a shared goal: to get their people back on the land.
