The idea of a word family is important for a systematic approach to vocabulary teaching and for deciding the vocabulary load of texts. Inclusion of a related form of a word within a word family depends on criteria involving frequency, regularity, productivity and predictability. These criteria are applied to English affixes so that the inflectional affixes and the most useful derivational affixes are arranged into a graded set of seven levels. This set of levels and others like it have value in guiding teaching and learning, in standardising vocabulary load and vocabulary size research, in investigating lexical development and lexical storage, and in guiding dictionary making. © 1993 Oxford University Press.

It means students without learning vocabulary, students do not know the meaning of the words and how to use the word.

This chapter examines interviews conducted with Muslim advocates whose work against domestic violence (DV) focuses on awareness and prevention. There is a shared story arch among many of the advocates that supports the primacy of an experienced and embodied ethic on non-abuse that is then translated into active work in the community and in a later step a search for religious discourse in order to further effective activism. Advocates often first recognized domestic abuse as wrong, then became critical of the ways in which Muslim communities address or do not address this issue, and responded by taking action and developing or finding religious arguments. It is in this last part of the story that religious authority, and with that status and authority in communities, became an existential issue for the effectiveness of anti-DV work. The chapter then reflects on the connection between feminist ideas about patriarchy and DV on the one hand and acceptance/rejection of

such ideas in Muslim communities on the other.

**Answer:** Centripetal acceleration =  $v^2/r = (2 \text{ m/s})^2 / 0.5 \text{ m} = 8 \text{ m/s}^2$

**Question 2:** A 5 kg mass is suspended from a spring with a spring constant of 200 N/m. If the mass is pulled down 0.1 m and released, what is the amplitude of the resulting oscillation?

**Answer:** Hooke's law:  $F = -kx$  Amplitude = (Displacement) / 2 =  $(0.1 \text{ m}) / 2 = 0.05 \text{ m}$

**Question 3:** A wave moves with a velocity of 300 m/s and a frequency of 50 Hz. What is its wavelength?

**Answer:** Wavelength = Velocity / Frequency =  $300 \text{ m/s} / 50 \text{ Hz} = 6 \text{ m}$

**Question 4:** A light ray enters a glass block from air at an incident angle of 30 degrees. If the speed of light in air is  $3 \times 10^8 \text{ m/s}$  and the index of refraction of glass is 1.5, what is the angle of refraction?

**Answer:** Snell's law:  $n_1 \sin \theta_1 = n_2 \sin \theta_2$  Angle of refraction =  $\sin^{-1}[(n_1/n_2) \sin \theta_1]$   
=  $\sin^{-1}[(1/1.5) \sin 30 \text{ degrees}] = \mathbf{20 \text{ degrees}}$

**Question 5:** An electric circuit consists of a 12 V battery, a 5  $\Omega$  resistor, and a 2  $\mu$ F capacitor connected in series. What is the time constant of the circuit?
