The command to Marry is Formulated in a Hadith: O young men, whoever among you is able to marry, let him Marry A Comparative Jurisprudential Study.

ABSTRACT This research entitled “The Order to Marry in Sahih Muslim - A Comparative Fiqh Study” indicates a jurisprudential ruling that the jurists dealt with in clarification and detail, which is the ruling on marriage, and this topic deserves study and research; Because it is closely related to the life of humanity So the researcher began to embark on this subject with the hadiths in which the command to marry was mentioned, so does the ordering formula make it obligatory? Or on the scar? Or on permissibility?, Then the researcher touched on highlighting the position of the jurists and their opinions on this subject, presenting and discussing their evidence to come up with a sound opinion and a middle one among those opinions Therefore, the research was divided into an introduction, two chapters, and a conclusion, where the researcher mentioned in the introduction the importance of the research. In the first topic, the researcher dealt with the definition of the terms of the title, where the researcher touched on the definition of the matter, marriage, language and terminology, the definition of Imam Muslim, and his book (Sahih Muslim). Then, in the second topic, the researcher dealt with: the matter of marriage and its ruling, by mentioning the sayings of the jurists and their evidence, and among the conclusion of the research was a set of results reached by the researcher.

'This might be him; the guy I'm gonna marry': Love and sexual relationships between female elite-athletes and male coaches.

Infatuation, love and sexual relationships exist virtually anywhere. Coach–athlete sexual relationships (CASR), however, are overlooked and under-researched. Within sport sociology, CASR have been framed predominantly by a sexual abuse discourse. Informed by Foucault's discourse analysis, this study explores how discourses regarding performance enhancement in elite-sport and coaching, and romantic love, frame female elite-athletes' experiences with CASR. Interviews with four female elite-athletes aged 26–30 were conducted. The results indicate that CASR are potentially problematic because they intersect and challenge discourses comprising elite-sports, coach–athlete relationships, female sexual agency, and love. Moreover, discourses of power differ between the professional and private contexts. While the athletes expect their coaches to exert dominance and control in the elite-sport context, love relationships are about equally and mutually giving away power and control. Although CASR can facilitate motivation and performance, framing CASR as inherently unequal and abusive can contribute to stigmatisation, secrecy and athlete disempowerment.

PRINCIPLES AND PRACTICE OF PEDIATRIC ONCOLOGY 6TH EDITION

What is the rule of 30 in pediatric oncology? The “rule of 30” may be used to adjust a dose from mg/m² to mg/kg according to the assumption that a patient with a BSA of 1 m² weighs approximately 30 kg. By this rule, a 1,500-mg/m² dose of cyclophosphamide in an older child could be converted to a dose of 50 mg/kg in a younger child.

What is a pediatric oncologist? Listen to pronunciation. (pee-dee-A-trik on-KAH-loh-jist) A doctor who has special training in diagnosing and treating children with cancer.

Why is pediatric oncology important? Children with cancer typically respond better to treatments, such as chemotherapy, which uses strong medication to kill cancer cells. Doctors will often use chemotherapy to care for your child instead of surgery or radiation therapy, which is often used for adults.

What are the new treatments for children's cancer? Diverse therapeutic agents such as small-molecule kinase inhibitors, monoclonal antibodies and other antibody-based therapies (e.g., bispecific T-cell engager, antibody-drug conjugate), and genetically engineered cell therapy (CAR T-cell) are now part of the growing pediatric oncology armamentarium along with cytotoxic ...

What is the rule of 50 peds? You can use the memory aid of the “rule of 50” or the “5/2/1 rule” – the concentration of dextrose and the volume per kilogram should equal 50. Of note, oftentimes D50 is avoided given its hypertonicity and should not be given through a peripheral IV.

What is rule of 6 pediatric? One way to help remember the general ages of presentation for common pediatric abdominal surgical emergencies is the mnemonic known as “the rule of 6.”² While not everyone follows the rule, common ages of presentation include: malrotation with midgut volvulus at around 6 days of life, pyloric stenosis at around 6 weeks ...

What is the highest salary for a pediatric oncologist?

What is the basic pediatric oncology? Pediatric Oncology concerns cancers in children between birth (sometimes cancers like neuroblastoma can even be diagnosed prenatally) and up to the age of 18 years or so.

What is the outlook of a pediatric oncologist?

What skills do you need for pediatric oncology?

What is the most common pediatric tumor? The most common types of cancer diagnosed in children ages 0 to 14 years are leukemias, brain and other central nervous system (CNS) tumors, and lymphomas.

What is the success rate of pediatric oncology? Survival rates for children with cancer Because of major treatment advances in recent decades, about 85% of children with cancer now live 5 years or more after being diagnosed with cancer.

What is the biggest cancer killer for children?

What is the children's cancer strategy? We will actively support children and young people to take part in clinical trials, so that participation among children remains high, and among teenagers and young adults rises to 50% by 2025. More effective consent processes for using data and tissue samples in research will contribute to improving survival outcomes.

What is the best treatment for childhood cancer? Most pediatric cancers are treated with surgery, chemotherapy, radiation, or a combination of those therapies. Chemotherapy drugs, administered intravenously, attack the fast-growing cells that comprise most pediatric cancers. Pediatric cancers tend to respond better to chemotherapy than some adult cancers.

What is the rounding rule for pediatrics? Pediatrics – use the same rounding rules applied to adult medications depending on type. Kilograms – round to the nearest tenth. Body Surface Area – round to the nearest hundredth.

What is the rule of 25 pediatric? The more conservative Rule of 25, which states that no more than 1 cartridge of local anesthetic should be given for each 25 lb of patient body weight, will impart an added safety layer in children ≥ 8 years of age.

What is the pediatric dosing rule? Clark's rule equation is defined as the weight of the patient in pounds divided by the average standard weight of 150 pounds (68 kg) multiplied by the adult dose of a drug to obtain the pediatric medication dose, as is demonstrated below: $(\text{Weight}^* \text{ divided by } 150 \text{ lbs.}) \times \text{Adult Dose}^{**} = \text{Pediatric Dosage}$.

What is the nurse patient ratio for pediatric oncology? A nurse to patient ratio of 1:5 for paediatric oncology units and 1:2 for critical care and bone marrow transplant units is recommended.
