'Music Lexicography.'. Music in the Medieval English Liturgy. A Catalogue and Commentary. British Rhymed Offices. A general introduction to rhymed offices, still quite the most extensive survey of the repertory, has appeared in the R volume of the Dictionary of the Middle Ages. The repertory consists of poetic texts and chants in thousands of proper offices for new feast-days and saints' days of the later middle ages, mostly between the tenth and sixteenth centuries, from all over Europe. The texts, newly compiled, are for the antiphons responsories of the canonical hours: often the chants that accompany them are also newly composed or borrowed and adapted from earlier models. Of the hymns, lessons, prayers, and dialogues that also form a part of these new offices, only the hymns are always poetic. They are normally not newly-composed but are standard hymns appropriate to the saint or feast; although occasionally a new antiphon text is identical with a stanza of a hymn, various features make it clear that hymns are not regarded as a part of the rhymed office proper. New lessons and prayers are often closely related to the texts of the new office chants and would have to be taken into account in any detailed study of an individual office.

Comparisons between continental and British music libraries on the one hand and British and American on the other give evidence of the richness of Great Britain in the field of old printed music. Even here there is little realization or adequate means of knowing the extent of this wealth. Not that the older catalogues of the continent, especially in Italy, Austria, Germany, and France, or the newer ones of America, are much better, more consistent, or up to date than the British, although they are probably more numerous. On the whole the music libraries abroad are, however, better known—at least in their own countries. In this connexion we are not so much concerned with national music as with great music of all nations; the extent of the latter only is open to comparison. No difficulty would arise in gaining knowledge of a nation's accumulation of incunabula, collected in the general and the special libraries: there are lists proudly showing the national wealth in this sphere, and the British catalogues of incunabula are, perhaps, the best in the world. But it is nearly impossible to get, from the few existing printed music catalogues, exact knowledge about the distribution of rare music. The enterprise of R. Eitner, about 1900, in publishing single-handed in ten volumes a world catalogue of old music partially failed because for the most part he undertook the task of collecting his titles by correspondence. He was handicapped also by the fact that the best catalogues were published only after he had completed his work. His references to music in Britain were collected without visiting the libraries and are very incomplete.
