diagram was used to identify articles through the filtering and data extraction process. Of the 487 articles downloaded, the remaining 88 final articles went through the inclusion and exclusion screening process using criteria and were analyzed. The results of the review article are in accordance with the systematic review analysis of the literature. The trend review is the cooperative learning learning model, proven by the analysis of the number of articles per year. The results of using the physical education learning model in primary and secondary schools provide a positive influence on students. The use of innovative and relevant physical education learning models can increase student participation, learning outcomes, health and physical condition, motivation, and student involvement in the learning process.
