SUPPORT AND RESISTANCE HOW TO USE

SUPPORT AND RESISTANCE TO LIMIT TRADING

LOSSES AND IDENTIFY BREAKOUTS

How do you trade breakouts at support and resistance? As soon as the price makes a real break through the target level, we open a trade: in case of a resistance breakout, we buy a currency pair; in case of a support breakout, we sell it. Stop Loss is usually placed above the broken out support and below the broken out resistance.

How to use support and resistance in trading? Support is a price point below the current market price that indicate buying interest. Resistance is a price point above the current market price that indicate selling interest. S&R can be used to identify targets for the trade. For a long trade, look for the immediate resistance level as the target.

What is the best indicator to use with support and resistance? Fibonacci Indicator One of the most popular support and resistance indicators is the Fibonacci.

How do you know when support and resistance will break?

How do you avoid false breakouts in support and resistance? The very best way to protect yourself from false breakouts is to wait for a close below or above the support or resistance level respectively. It isn't enough for the market to simply move

beyond a level. We need to see a close outside of the level in order to validate the setup.

Which indicator is best for a breakout strategy? Indicators such as Moving Averages, RSI and MACD can be used to measure the strength of the breakout. Volume: An important factor to identify a breakout is the trading volumes of the stock. It is essential that the volumes traded should be high on the day of the breakout.

What time frame is best for support and resistance? Support and resistance can be found in all charting time periods; daily, weekly, and monthly. Traders also find support and resistance in smaller time frames like one-minute and five-minute charts. But the longer the time period, the more significant the support or resistance.

What is the SMC strategy in trading? The Smart Money Concept (SMC) is a trading strategy focused on understanding and leveraging the market movements initiated by institutional investors, such as banks and hedge funds. It posits that by identifying the trading behaviours of these major players, retail traders can make more informed decisions.

Why does support and resistance not work? Because, there is a possibility of price undershoot, and overshoot. The more times support, and resistance gets tested, the weaker it becomes. Because the order in the markets gets filled and the barrier will break. You should not place a stop-loss just below the lows, and highs in the market.

What is the 4 8 line support and resistance? 4/8 Line (Major Support/Resistance) This line provides the highest amount of support and resistance. This line acts as a solid support when prices are above it, and as the dominant resistance when prices are below it. This price level is one of the best levels to place a new sell and buy.

How do you draw the best support and resistance?

What is the formula for support and resistance? First Resistance (R1) = $(2 \times PP) - Low$. First Support (S1) = $(2 \times PP) - High$. Second Resistance (R2) = $PP + (High - Low)$

What is the best way to trade breakouts?

How to enter breakout trade? A breakout trade involves entering a long position after the asset price breaks above a resistance level, or a short position if it breaks below the support level.

How to spot breakout in trading? Breakouts are commonly associated with ranges or other chart patterns, including triangles, flags, wedges, and head-and-shoulders. These patterns are formed when the price moves in a specific way which results in well-defined support and/or resistance levels. Traders then watch these levels for breakouts.

How do you trade breakout failures? Since some traders look to establish positions when a breakout occurs, in the breakout direction, they may opt to close those trades if the breakout fails. Failed breaks may also signal traders to enter a trade in the opposite direction of the attempted breakout.

The Rise of Electric Vehicles: The Alameda County EV 2026 and Beyond**

What is the Alameda County EV 2026?

The Alameda County EV 2026 is a plan adopted by the Alameda County Board of Supervisors to transition the county's entire transportation fleet to zero-emission electric vehicles (EVs) by 2026. It is one of the most ambitious EV goals in the United States.

The EV Boom

The global EV market is experiencing explosive growth. In 2021, global EV sales reached 6.6 million units, representing a 108% increase from the previous year. This growth is expected to continue, with some projections suggesting that EVs will account for more than half of all new car sales by 2030.

California's EV Dominance

California is the undisputed leader in EV adoption in the United States. As of 2023, there are over 1.5 million EVs registered in California, representing more than 17% of all light-duty vehicles in the state.

Drivers Behind California's EV Popularity

- **Government incentives:** California offers generous rebates and tax credits for EV purchases.
- **Environmental concerns:** California has strict air quality regulations, and EVs are seen as a way to reduce pollution.
- **Tech-savvy population:** California is home to Silicon Valley and has a highly educated and technologically advanced population.
- **Access to charging infrastructure:** California has a well-developed network of public EV charging stations.

Investment Potential

The EV sector presents significant investment opportunities. EV manufacturers, battery suppliers, and charging infrastructure providers are all poised to benefit from the growing demand for EVs.

Chinese EV Expansion

Chinese EV manufacturers are making inroads into the global market. Companies like BYD and NIO are offering competitive EVs at attractive prices, and they are starting to gain market share in Europe and the United States.

China: The Largest EV Consumer

China is the world's largest consumer of EVs, accounting for over half of global sales in 2021. The Chinese government has heavily subsidized EVs, making them more affordable for consumers.

EV Batteries: The Achilles' Heel?

While EVs offer numerous advantages, the sustainability of their batteries remains a concern. Lithium-ion batteries, the most common type used in EVs, have a limited lifespan and can pose environmental hazards when disposed of improperly.

Next-Generation Battery Technologies

Researchers are working on developing next-generation battery technologies that are more sustainable and efficient. These include solid-state batteries, graphene batteries, and hydrogen fuel cells.

GM's Nickel Supply Deal with Vale

In January 2023, GM announced a deal with the Brazilian mining company Vale to supply it with nickel for its EVs starting in 2026. Nickel is a key component in EV batteries.

Honda's EV Ambitions

Honda has announced plans to invest heavily in EV development and production. The company aims to have 30% of its global sales be EVs by 2030.

EV Battery Lifespan and Disposal

EV batteries typically last around 10-15 years. When they reach the end of their lifespan, they can be recycled or repurposed for other uses. Tesla and other EV manufacturers are exploring ways to extend battery life and improve recycling capabilities.

Elon Musk's New Battery

Elon Musk, the founder and CEO of Tesla, has teased the development of a new battery technology that will reportedly be cheaper and more powerful than current lithium-ion batteries.

Future Battery Technologies

Future battery technologies that could replace or supplement lithium-ion batteries include sodium-ion batteries, metal-air batteries, and quantum batteries.

Indonesia's Nickel Wealth

Indonesia is rich in nickel, a key component in EV batteries. The country is ramping up its nickel mining and processing capacity to meet the growing demand from EV manufacturers.

Competition in the EV Market

The EV market is becoming increasingly competitive, with numerous automakers launching new models and technologies. It remains to be seen which companies will emerge as long-term winners.

Toyota's EV Plans

Toyota, the world's largest automaker, has been slower to embrace EVs than some of its competitors. However, the company has recently announced plans to accelerate its EV development and production.

Apple's Rumored EV

Apple has been rumored to be developing an electric car for several years. While the company has not officially confirmed any plans, it has hired numerous automotive engineers and filed several EV-related patents.

Mazda's Electric Ambitions

Mazda has announced plans to launch its first fully electric vehicle in 2025. The company aims to have 40% of its global sales be EVs by 2030.
