Textiles play a decisive role in history: attire not only indicates status, gender, ethnicity, and religion but illustrates how such boundaries are continuously being negotiated, shifted, and recreated. Fashionable Traditions captures the complex reality of Asian handmade textile production and consumption. From traditionalist discourse and cultural authenticity to fashion and market trends, the contributors to this collection demonstrate the multilayered influence of often contradictory forces. In-depth, ethnographic case studies reveal the entangled relationships between local artisans, external interventions, and consumers, while acknowledging the broader frameworks in which such relationships are situated. Together these stories offer a vivid account of the socio-economic, political, and cultural dynamics in various parts of Asia and emphasize that fashion is neither a Western prerogative nor do its roots reside solely in the West.

Credit Card Debt in Kota Damansara, Selangor: An Investigation of Credit Card Debt Determinants and Factors.

This paper explores factors influencing credit card debts in Kota Damansara, Selangor, Malaysia. Specifically, variables such as attitude, income, financial knowledge and bank policies are examined. The questionnaire in the study was distributed among 120 credit card holders. The study serves as guide researchers to extend the research work covering more variables in different economies. The data is collected using simple random sampling techniques. The results indicate that attitude, income, financial knowledge and bank policies have significant relationship with credit card debts. The contribution to this result can help to developing market economies or even developed countries where credit card debt is high. It gives awareness to the banker on understanding their credit card consumers, as well as providing insights to the credit card holders.

Simultaneously holding liquid assets and credit card debt is known as the credit card debt, or co-holding, puzzle. Around 45% of households in the US Panel Study of Income Dynamics (2010-2014) fall into this category. I revisit the puzzle from the perspective of the degree of co-holding and show around 40% of co-holders hold between 2 and 200 times more liquid assets than credit card debt. This new fact has implications for co-holding explanations based on liquidity. I propose an alternative explanation in which consumers value money and thus dislike making payments. This explanation has applications to a range of consumer choices, such as Buy Now Pay Later and the credit card premium. JEL Classifications: D11, D12, D14, G51

THE FLAVOR BIBLE THE ESSENTIAL TO CULINARY CREATIVITY BASED ON THE WISDOM OF AMERICAS MOST IMAGINATIVE CHEFS

The Flavor Bible: An Essential Guide to Culinary Creativity

What is The Flavor Bible?

The Flavor Bible is a culinary reference book that explores the harmonious pairings of ingredients based on the wisdom of America's most imaginative chefs. It was compiled by Karen Page and Andrew Dornenburg and first published in 2008.

Why is it Considered an Essential Guide?

The Flavor Bible is widely regarded as an essential tool for chefs and culinary professionals due to its comprehensive and practical approach to ingredient pairings.

It provides a wealth of information on flavor profiles, affinities, and complementary ingredients, empowering chefs to create innovative and harmonious dishes.

How Does it Work?

The Flavor Bible is organized alphabetically by ingredient. For each ingredient, it lists potential pairings based on taste, texture, and aroma. There are over 1,400 ingredients featured, with extensive cross-referencing to facilitate ingredient exploration.

What are Some Examples of Flavor Pairings?

- **Apple:** cinnamon, cardamom, nuts, caramel, cheese
- **Chicken:** lemon, garlic, thyme, paprika, honey
- **Chocolate:** vanilla, cinnamon, orange, nuts, berries

How Can it Enhance Culinary Creativity?

By providing a structured approach to ingredient pairing, The Flavor Bible encourages chefs to experiment with unexpected combinations. It stimulates creativity by breaking down traditional flavor pairings and inspiring chefs to explore new taste experiences.

Mock exam paper 1: EMQs and SBAs. Nursing OSCEs. Preparation for the OSCE Assessment.

The need to prepare adequately for any university examination is beyond refute and students may struggle with the OSCE assessment if they are unprepared or have unrealistic expectations of the OSCE process (Bloomfield et al. 2010). Adequate preparation will enable you to: ? Minimize any anxiety related to the examination, ? Understand the requirements of the OSCE, ? Facilitate accurate, systematic and timely performance of the OSCE, ? Enable you to give full justice to your professional ability.... OSCEs represent an important opportunity for you to further develop your nursing knowledge and skills. Effective preparation will give you a better opportunity to learn effectively from your OSCE and enable you to view the experience positively (see Chapter 14 Reflecting upon your OSCE). Preparation for your OSCE will clearly be affected by your own learning style and where and how you study is likely to be adapted to suit your own learning needs. You may well have completed a learning style assessment quiz such as Honey and Mumford's (1986) at university; if not, you are able to access this online. It may be best to link your study for your OSCE to your learning style. Honey and Mumford (1986) identified several differing learning styles that are briefly described here. These include: ? Reflector: Tend to explore issues in depth before reaching a decision, ? Theorist: Logical and enjoy researching and using theory to enable understanding, ? Pragmatist: Like to apply things in practice and experiment with new ideas, ? Activists: Are open to new ideas and learn through experience alongside others. Therefore you can use your understanding of your learning style to help plan how you may best revise/prepare for your OSCE. For example: ? Activist: May prepare best by practising for your OSCE with your colleagues and practising your OSCE in the skills room or in a group outside of university. ? Reflector: May learn best by reviewing your own experience or learning from reflecting on experiences you have had in clinical practice. ? Theorist: May prepare by reviewing the literature and reading around the subject matter of your OSCE in appropriate literature, OSCE and clinical skills books.

Veterinary Record. Veterinary Record. Dogs Trust shop celebrates £1 million sales. Industrial Marketing Management. Industrial Marketing Management. Sales forecast errors for new product projects. The Diabetes Educator. Diabetes Educ. The Diabetes Time Management Questionnaire.

PURPOSE

The purpose of this study was to test the psychometric properties of the 49-item Diabetes Time Management Questionnaire (DTMQ) in individuals with diabetes. The DTMQ was designed to assess general time management skills and those specifically relevant to compliance to a diabetes healthcare regimen.

METHODS

Participants completed the DTMQ; the Habits, Attitudes, and Knowledge Questionnaire of Diabetic Compliance (HAK); and the Diabetes Knowledge Schedule (DKS) to provide two indices of construct validity of the DTMQ. Three HAK items related to time management skills (HAK-TM) provided an index of concurrent criterion-related validity for the DTMQ.

RESULTS

Test-retest stability reliability results were significant for DTMQ total and individual item scores. Concurrent criterion-related validity of the DTMQ was supported by a significant correlation with the HAK-TM items. Construct validity of the DTMQ was partly supported by significant correlations with the DKS and two HAK items measuring diet and exercise compliance.

CONCLUSIONS

The results support the use of the DTMQ to assess the time management skills of individuals with diabetes.

Sociological and Philosophical Aspects of Human Interaction with Technology. Case Nokia. On User Experience Measurement Needs.

Measurements related to user expectations, behaviors and experiences can provide useful data to many roles and teams in a company. Each role provides different

views to the question “what should be measured, and why?” We conducted an empirical study on user experience (UX) measurement needs at different units and levels in one corporate (Nokia) and asked which kinds of UX measurements would be useful for different functions. We identified common UX measurement needs on 8 different themes.
