Hieroglyphic palaeography has never been systematically studied until very recently. The earlier works considered the hieroglyphic sign from the perspective of the history of art. In the 1970s, new perspectives emerged thanks to H. G. Fischer, who developed an original approach through which the sign is coupled with cultural facts. However, it was not until 2004 that the first hieroglyphic palaeography program was launched by D. Meeks. There is, however, an area that escapes hieroglyphic palaeography: that of the cursive hieroglyphics. This is the reason why U. Verhoeven has just launched an inventory program of hieratic and hieroglyphic cursive signs. Only the analysis of the different stages of execution of a monumental inscription—from the cursive sign to the carved and painted sign—will make it possible to understand the work of scribes. Hieroglyphic palaeography will then be able to make up for lost time.

Egyptian hieroglyphic script is figurative; its signs are images depicting the realia of the pharaonic universe in the same manner as do the figurative arts. To become script signs these images undergo three constraints: calibration, dense and harmonious arrangement, and orientation (i.e. direction of reading). Its figurativity, its flexible manner of engaging with the writing surfaces, and its complex system of encoding the linguistic data provide the hieroglyphic script with important specific potentialities that were carefully exploited in its symbiotic adaptation to objects and monuments and in its enriching the linguistic messages it conveyed with ideological connotations. Egyptian hieroglyphs—but not the very hieroglyphic writing system!—were borrowed in the Meroitic hieroglyphic script and chiefly in the Proto-

Sinaitic alphabet. Via this alphabet and its Semitic successors, some hieroglyphs are ultimately the ancestors of European characters.
