In more advanced elementary education, scribes learned to write typical formulaic documents, such as letters. After making lists and receipts, writing letters was the most common type of ancient scribal activity. These model documents are known in the cuneiform school tradition, which served as a model in the development of the early alphabetic school tradition. The earliest alphabetic examples of model letters were excavated in Ras Shamra, that is, ancient Ugarit. They illustrate both aspects of borrowing from the cuneiform tradition as well as creative adaptation. Letter writing followed a formal template, but this template was made to be adapted. One of the most important adaptations of this scribal learning was in the prophetic messenger formula of biblical prophecy. The genre was also adapted for biblical storytelling. And, some of the technical and formal aspects, such as the use of "and now" as a new paragraph marker, were adapted and applied by scribes more generally to the writing of literature.
