THE CULT OF PERSONALITY TESTING HOW PERSONALITY TESTS ARE LEADING US TO MISEDUCATE OUR CHILDREN

The Cult of Personality Testing: How Personality Tests Are Leading Us to Miseducate Our Children

Personality testing has become increasingly popular in recent years, with tests being used to assess children's strengths and weaknesses, determine their learning styles, and even predict their future success. However, a growing body of research is casting doubt on the validity and efficacy of these tests.

What are the problems with personality tests?

One of the biggest problems with personality tests is that they are often based on flawed assumptions about human behavior. For example, many personality tests assume that people are static and unchanging, when in reality our personalities are constantly evolving. Additionally, personality tests often rely on subjective self-reporting, which can be biased or inaccurate.

How are personality tests being used in schools?

Personality tests are often used in schools to identify children who need additional support or to place them in different learning groups. However, there is little evidence to support the use of personality tests for these purposes. In fact, some studies have shown that personality tests can actually lead to discrimination against certain groups of children.

What are the alternatives to personality testing?

There are a number of more effective alternatives to personality testing that can be used to assess children's strengths and weaknesses. These include:

- **Observation:** This involves observing children in different settings to identify their interests, abilities, and learning styles.

- **Interviews:** This involves talking to children about their thoughts, feelings, and experiences.
- **Performance-based assessments:** This involves ?????????? ?????? on their actual performance on tasks, rather than their self-reported personality traits.

What should parents do?

If you are considering having your child take a personality test, it is important to be aware of the limitations of these tests. You should also talk to your child's teacher or another trusted adult to get their input on whether or not testing is appropriate. It is also important to remember that personality tests are just one piece of information that can be used to understand a child. There are many other factors, such as a child's family background, experiences, and environment, that can also play a role in their development.

MATHCOUNTS 2007 CHAPTER SPRINT ROUND

What level of math is MATHCOUNTS? Register for free all school year The MATHCOUNTS Foundation is a 501(c)(3) non-profit organization that reaches students in grades 6-8 in all US states and territories with 2 extracurricular math programs. Hundreds of thousands of students participate in our programs or use our resources each year.

What is a sprint round? Sprint Round - This is a 40-minute multiple choice round consisting of thirty questions. Students may not use calculators on this round. 4 points are awarded for each correct answer and 1 point is subtracted for each incorrect answer, with no penalty for skipped questions.

What is the target round in MATHCOUNTS school? Target Round Students have 6 minutes to complete each set of two problems. Students may not go back to previous rounds (or forwards to future rounds) even if they finish before time is called. Calculators are allowed for the Target Round. Usually comprised of one "confidence booster" and one hard problem.

What is the history of MATHCOUNTS? History. Mathcounts was started in 1983 by the National Society of Professional Engineers, the National Council of Teachers of Mathematics, and CNA Insurance to increase middle school interest in mathematics. The first national-level competition was held in 1984.

Is AMC 8 harder than MATHCOUNTS? It is administered by the Mathematical Association of America. The AMC 8 is the hardest of the three math competitions on this list. Many consider Math Olympiad and Mathcounts to be good preparation for the AMC 8.

Has a girl ever won MATHCOUNTS? There are a lot of 7th-grade girls who did well in the state competition, so they might do really well next year and then our team might be almost all girls." Winchester Thurston seventh-grader Vivian Loh is the first girl to win the Pennsylvania MATHCOUNTS competition! ! ????

What is a good score on MATHCOUNTS chapter? For a MATHCOUNTS competition, a score of 23 out of 46 (or 50%) is absolutely fantastic!

Who won MATHCOUNTS 2024? Osprey native Benjamin Jiang named 2024 RTX MATHCOUNTS® National Champion.

Does MATHCOUNTS allow calculators? Calculators are not permitted in the Sprint and Countdown Rounds, but they are permitted in the Target, Team and Tiebreaker (if needed) Rounds. When calculators are permitted: Students may use any calculator (including programmable and graphing calculators) that does not contain a QWERTY (typewriter?like) keypad.

Is MATHCOUNTS prestigious? Is the program prestigious? Yes, the Mathcounts Competition Series is highly competitive and prestigious. Thousands of students participate annually from across the country, with only 200+ making it to the finals. The national winner receives a \$20,000 scholarship.

How can I improve my MATHCOUNTS score? Practicing problems from every MATHCOUNTS topic will help ensure that no question is too difficult to solve. For example, if you missed a question from your practice session because you did not understand the concept. Make a note of it and take it upon yourself to learn how to solve that specific problem.

Does MATHCOUNTS give scholarships? We offer a college scholarship exclusively for MATHCOUNTS alumni!

What grade level is MATHCOUNTS? Math Counts is a nationwide Mathematics Competition program and is open to all 8th graders at Pierce who are interested in exploring challenging middle and high-school level mathematical concepts in a relaxed, collaborative setting.

Can homeschoolers participate in MATHCOUNTS? In addition to their registration form and payment, participating home schools must submit a separate Home School Participation Form. Tutoring/enrichment centers or other groups that do not function as students' official school of record are not eligible.

How long is MATHCOUNTS sprint? Sprint Round: focuses on speed and accuracy. Students have 40 minutes to complete 30 math problems without a calculator. Target Round: focuses on problem-solving and mathematical reasoning. Students receive 4 pairs of problems and have 6 minutes to complete each pair, assuming the use of a calculator.

What are the 4 levels of math? The typical order of math classes in high school is: Geometry. Algebra 2/Trigonometry. Pre-Calculus. Calculus.

What is the hardest level of math? 1. Real Analysis: This course is sometimes referred to as the most difficult undergraduate math course because it delves deep into the theoretical foundations of calculus. It relies heavily on rigorous proofs and demands a high level of abstract thinking.

What level of math is 11th grade? Students in grade 11 are expected to show clear understanding of core algebraic expressions, functions, and proficiency in collecting and analyzing data. During their junior year, most students take Algebra II, while others may take Geometry or even Pre-Calculus.

Is MATHCOUNTS prestigious? Is the program prestigious? Yes, the Mathcounts Competition Series is highly competitive and prestigious. Thousands of students participate annually from across the country, with only 200+ making it to the finals. The national winner receives a \$20,000 scholarship.

Effect of Rewritten Content Textbook Passages on Middle Grade Students' Comprehension of Main Ideas: Making the Inconsiderate Considerate.

This study sought to determine if content area textbook passages could be rewritten such that middle grade students' main idea comprehension ability was enhanced. Excerpts from fifth-grade science textbooks were read by fifth-grade students in one of two versions: (a) an original (inconsiderate) version in which main ideas were frequently implicit, those main ideas that were explicitly stated in the text were not always prominent (i.e., placed initially) in paragraphs and passages, and there were few, if any, headings or typographical aids to cue main ideas, or (b) a rewritten (considerate) version in which all main ideas were explicit in the text and typed in italic, each main idea appeared at the beginning of the text unit, and headings cued main ideas. Several recognition and recall items assessed students' ability to identify and generate main ideas at both the paragraph and passage levels. Results revealed that after reading the rewritten text versions, some students were able to compose significantly more passage main ideas, and all students were able to compose significantly more paragraph main ideas. Groups did not differ on a main idea recognition task. Additional data from a series of questions which required the students to compare original and rewritten versions of the science texts tended to

support the finding that content area selections rewritten to make them more considerate improves students' main idea comprehension.

Psychological Reports. Psychol Rep. Effects of Variations in Question-Phrasing on True-False Answers by Grade-School Children.

A 72-item questionnaire was administered to 97 elementary school children in Grades 3 to 6. An attempt was made to assess the effect of asking the same basic type of question, when the following variations were independently introduced: (1) presence or absence of a negative in the statement of the question, (2) truth value of the statement to be answered, and (3) form of presentation of the material. All three variations produced some statistically significant results, such that number of errors was correlated with "mental steps" of decoding necessary for solution. Developmental differences with respect to the tasks were noted, such that certain discriminations were made earlier than others within the variations.

. Georgia Journal of Literacy. GJL. The Effects of Question-Answer-Relationship (QAR) Instruction on Standardized Reading Comprehension Test Scores of Third-Grade Students.

Despite many school reform initiatives designed to ensure reading proficiency for all students, recent reports from the National Assessment of Educational Progress (NAEP) reveal that only 37 percent of fourth-grade students and only 34 percent of eighth-grade students performed at or above the proficiency levels measured in reading (NAEP, 2017). This quantitative study used a non-equivalent control group design to examine the impact of direct instruction of the Question-Answer-Relationship (QAR) strategy on standardized reading test scores of third-grade students. It also specifically examined the impact of direct instruction of the QAR strategy on traditionally underserved students' standardized test scores. A two-way Analysis of Covariance (ANCOVA) was conducted. Adjusted marginal mean post-test scores in the group receiving treatment of the QAR strategy (64.580) were higher than the mean post-test scores of students who did not receive QAR

instruction (56.382). Adjusted marginal mean post-test scores of students who did not receive QAR instruction (56.382). Adjusted marginal mean post-test scores of historically underserved students showed no significant differences (60.05 and 60.90, respectively). In addition, adjusted marginal mean post-test scores of historically underserved and non-historically underserved students who received QAR instruction showed no significant differences (54.48 and 58.29).
