If We Are Too Small to See or You Have Forgotten: A postcolonial response to modern representations of the San in Alexander McCall Smith's No. 1 Ladies' Detective Agency series.

Alexander McCall Smith's enormously popular fiction series set in Botswana (2000–11) appears on superficial analysis to represent the San people benignly, even affectionately. Neil Graves (2010) submits that The No.1 Ladies' Detective Agency achieves an image of “untainted and uncorrupted” Botswana through a “three-stage process of engagement, disarmament and dismissal, leaving behind a saccharine utopian Western fantasy of primitive primordial Africa” (15). However, deconstruction via a postcolonial lens shows the depictions in this text to be insidiously harmful in the light of the San's social and political disenfranchisement in Botswana since independence. Six tropes from David Spurr's seminal work *The Rhetoric of Empire* (1993) are deployed to position the various representations of the San children in this series firmly within a postcolonial critique, since such classifications clearly define the particular nuances and levels of the characters' literary depictions.

The holistic agency (HA) is based on the idea of system and complexity theory, which embraces action learning and organization development. HA is a planned change that takes a systems approach and makes extensive use of collaborative techniques to both solve the immediate problem and leave the organization in a more competent state to handle future challenges. The success of public agencies can be improved by implementing a systematic administration that demands the identification, monitoring, and analysis of areas and the need for flexibility due to institutional and contextual changes in real-time frames. Attention should also be paid to financial and security services and management activities, such as planning, organization, command and control, and coordination. The science of management, with its systemic component, is a system of knowledge that can be used to understand relationships, predict results, and influence results in all circumstances if individuals are organized to work together to achieve a common goal.

. Sleuthing Miss Marple. The Female Detective, the 'Feminine-Heroic', and Appropriating the Gaze. Marple and Agency. Marple and Agency.

Chapter Five uncovers a previously unobserved strategy used by Christie to grant agency to Marple. This chapter argues that Christie parodically evokes the heroic paradigm in strategic depictions of Marple. Textual evidence demonstrates that Christie aligns the spinster-sleuth with ideals and characteristics more typically associated with masculine heroes, and blends these qualities with feminine traits. This endows Marple with feminine-heroic characteristics. Thus, Marple occupies a narrative position that both uses and subverts the heroic ideal. Further, this chapter shows that Christie interprets the archetypal detective's superior powers of observation in ways that prioritise a feminine perspective. Foucault's conceptualisation of the panopticon is adapted to demonstrate Marple's mastery of the gaze. The official investigation is stymied because it is read through a lens of masculine enquiry. It is only when the crime is investigated by Christie's woman detective, and considered from a feminine point of view, that it may be solved.

Are Hilary Mantel books easy to read? This is not an easy book to read, it's difficult to 'get into the rhythm' of it, which was why I think I failed twice before. Do I need to read the world of ice and fire? Should I read George R.R Martin's "A Song of Ice & Fire" novel series, even though I've watched all seasons of Game of Thrones? Yes. Not only does the TV series differ in terms of many important points in the development of the story but the ending will likely be far different as well.

Lighting in indoor and outdoor settings has a purpose of providing an environment that is deemed as being comfortable and safe with the highest amount of light at the lowest possible consumption of energy. On the downside, there are instances where lighting is not as efficient as it is expected to be. For instance, the current outdoor lighting infrastructure at the University Campus (Referred to as “Campus”) located in a southern town in the United States of America proves this fact. In reality, the lighting on this campus is outdated when compared to the expected lighting standards. The main objective of the chapter is to use lean tools to analyze data on the light luminosity, pole locations, and other conditions. The results suggest a recommendation for a lean solution for the implementation of new and additional lighting on the Campus, which is deemed to provide efficiency and safety.
