Engineering output usually concerns machines. A machine is a mechanism or a combination of mechanisms that perform work or convert energy. There are enterprises that manufacture a large engineering output (e.g., pistons, ball, and roller bearings). Such an output is called a product. Depending on their use purpose, products can be obtained from main and auxiliary manufacture.

Global manufacturing is currently facing major transformations. First is the shortened life cycle of products due to the diversification and sophistication of customers' needs. Because of this, the manufacturers need to realize the shortest lead time possible in cooperation with their suppliers from the product development stage, through to manufacturing, and finally to sales, so that they are able to respond to this change. Second, it is essential to create a new corporate management technology necessary for the deployment of global production, worldwide uniform quality, and simultaneous production and to manage such production in a systematic and organized manner. Based on this, the author believes it necessary to establish a new management technology toward innovation of manufacturing fundamentals for all the business processes of each department from upstream to downstream.

<p>In Indonesia, many types of motorcycle are produced and marketed. Most of them are made by foreign manufacturers. The manual books which are printed in foreign languages such as English may cause some problems for the motorcycle owners and users in the country. One of the problems is the translation of the technical terms in the manual books. It is thus challenging to analyze the translation

techniques applied in the translation of the automotive technical terms in <em>Yamaha Nmax Owner's Manual</em>, and the impact of translation techniques on the accuracy, acceptability and readability. <em>Yamaha Nmax</em> is one of the motorcycles with high sales rate in the country. The methods of data collection consist of content analysis and in-depth interview with the raters and respondents. The results show that there are 8 techniques used to translate the technical terms and the use of the techniques result in a translation which is in general accurate, acceptable, and readable. The technique which produces translations with high level of accuracy, acceptability and readability is established equivalent. Meanwhile, generalization tends to produce translations with low level of accuracy, while borrowing produces translations with low level of acceptability and readability.</p>

Perhaps one measure of a book's value to a particular discipline is reflected by the number of editions the publisher releases, as this is a reflection of demand for the text. On this measure there can be little doubt that O'Hara's text has proved successful since five editions have been released since its original publication in 1956, and almost 200 000 copies have been sold. There are, however, other measures of performance that also guide us in assessing a textbook's contribution to the particular discipline in question. For example, the seminal nature of the book, the book's propensity for stimulating further research, and the frequency for bibliographic citation in other scholarly monographs, articles, and books are but a few examples of these measures of performance.

Practical Aspects of Rape Investigation. The Criminal Sexual Sadist. International Criminal Law. Fundamentals of International Criminal Law. Practical Aspects of Rape Investigation. The Maligned Investigator of Criminal Sexuality. Responsibility, Culpability, and Wrongdoing. Fundamentals of Criminal Law. Fundamentals of Criminal Law.

This book explores the theoretical principles underlying the general part of the criminal law. It demonstrates how the major general part doctrines governing actus reus, mens rea, and defences are informed by deeper considerations of responsibility, culpability, and wrongdoing. The book shows how many of the criminal law's doctrines can and should accommodate the demand that criminal convictions be imposed only upon persons who are culpable for their wrongdoing. But those same doctrines are not always driven by culpability. They are grounded also in certain further principles that the book identifies: specifically, principles of "moral responsibility", "ascriptive responsibility", and "wrongdoing". Neither can many of those doctrines be separated from questions of criminalization. Doctrines governing such matters as causation, omissions, complicity, and even mens rea all serve more than one foundational principle, requiring mediation and compromise. As such, the book argues, they engage wider debates about wrongdoing, and about the boundaries between liability and freedom.
