Criminal investigations and the criminal justice system are popularly characterised as a pursuit of the truth. Underlying this is the notion that there is a single, objectively verifiable truth. Chapter 1 starts by situating the trial in historical context and reviews earlier means of ascertaining liability. Many of the processes described appear absurd (and often barbaric) to contemporary eyes, but, historically, there was an acceptance that the methods had probative value. There was also a belief in absolute truth, which these techniques would expose. However, the Chapter reveals truth to be conceptually complex and contested. Attention will also be given to lying, showing that falsity does not necessitate bad faith. This finding is vital to later Chapters as it shows that erroneous conclusions can be drawn despite all parties acting in good faith and believing in the veracity of their accounts.

This chapter reflects on a long philosophical career. According to the author, what attracted him to philosophy was in part precisely the idea that it wasn’t like getting a job or following a professional career. He thought of philosophy as something you studied just for its own sake. The author also shares his life as a graduate student at Harvard University, where he was influenced by the likes of Burton Dreben and Rogers Albritton. He went to Berkeley in 1961, and cites his erstwhile colleague Thompson Clarke as the one philosopher to whom he owes the most. The author concludes by asserting that what he and his fellow philosophers have been doing is similar to the kind of investigation undertaken by greats such as Plato, Aristotle, René Descartes, David Hume, and Immanuel Kant.
